

**Prisma Health Care
Collaborative:
Now Taking New Referrals
for Suspected ADHD
Diagnosis, Treatment and
Management**

Here's how it works:

Prior to the appointment, patients complete a series of questionnaires. These assist us in understanding not only the patient's symptoms, but also their context.

Significant overlap exists between the symptom profiles of various mental health conditions. Understanding the whole picture, including developmental context, onset and progression of symptoms, response to previous interventions, and degree of functional impairment is critical to helping individuals achieve their goals. Our goal is not to provide labels - but to offer interventions that result in functional improvement.

Once the basics are in place, we work with patients to narrow in on functional impairments and contributing factors, collaboratively determining clear metrics to assess the effects of treatment.

Regular follow up (in person or virtual) continues as needed to achieve functional improvement.

Discharge documentation is provided to the referral source including suggestions for ongoing management.

**Referrals are
accepted via
Ocean
E-Referral
ONLY**

Please Note:

Providers in patient enrollment models (FHO/FHN) may want to consider de-rostering referred patients if on-going follow-ups are needed. Our team does NOT currently hold a focused practice designation.
